

Increasing yield and profitability of Hard Red Spring wheat.

What is Thrivus™ Inoculant?

Thrivus™ is the new inoculant for hard red spring wheat that increases yield and profitability through improved nutrient availability and uptake. Result helps in optimal and sub-optimal conditions by narrowing variability of performance within a field.

Thrivus™ improves yield, germination and biomass.

Thrivus™

Standard

Thrivus™ performs significantly better than industry bio-inoculants benchmarks.

Why should I use Thrivus™?

Increases profitability per acre by up to 50% and yield by an average of 3-4 bushels per acre.*

Improves nutrient uptake while minimizing environmental effects and narrowing performance variability.

A complete seed package that includes top seed varieties, preferred seed treatments and a leading-edge inoculant.

Improves financial and environmental sustainability through an extensively tested biological product.

What yield and profitability can I expect?

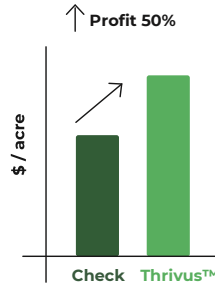

Yield:

Thrivus™ outyielded the untreated control by an average of 3-4 bushels per acre.

Profit Potential:

Based on typical results, Thrivus™ can increase profit by 50% per acre.

How does Thrivus™ work?

Thrivus™ takes advantage of a **combination of two microbes** to drive nutrient uptake and improve yield and profitability.
